## 1 Introduction

The Exercise, Recreation and Sport Survey (ERASS) is a joint initiative of the Australian Sports
Commission and state and territory departments of sport and recreation, and was first conducted in 2001.
This publication presents results from the fourth annual ERASS collection, which was conducted in 2004.
ERASS collects information on the frequency, nature and type of activities of persons aged
15 years and over for exercise, recreation and sport during the 12 months prior to interview. Participation means active 'playing' participation and does not include coaching, refereeing and spectating or activities related to work or household chores.

The total participation rate in physical activity for exercise, recreation and sport reported does not reflect the number of persons who are physically active on a regular basis; it refers to the number of persons who have undertaken exercise, recreation and sport during the previous 12 months. The frequency data provide an indication of the number of persons who are regularly active.

The survey is conducted quarterly throughout Australia. In 2004, ACNielsen completed the fieldwork and supplied the data tables provided in this report. The report was then prepared by the Australian Sports Commission in consultation with the states and territories.

This publication presents information regarding the:

- level and frequency of participation in organised and non-organised physical activity for exercise, recreation and sport
- type of participation in physical activity for exercise, recreation and sport
- trends in participation over time.

Information is available for both organised and non-organised exercise, recreation and sport, for all states and territories and for a variety of demographic variables.

The survey will be conducted again in 2005 and 2006, furthering the time series and ensuring the ongoing monitoring of participation trends.

## 2 Main findings

### 2.1 Overall participation

## Overview

During the 12 months prior to interview in 2004, an estimated 13.1 million persons aged 15 years and over participated in at least one physical activity for exercise, recreation and sport, a participation rate of $82.8 \%$ (Table 1). Household or garden chores, or activities that were part of work were not included.

However, the participation rate drops markedly when frequency of involvement is considered. An estimated 4.3 million persons aged 15 years and over exercised five or more times per week (27.5\%) (Figure 1). A total of 2.7 million persons did not participate in any physical activity for exercise, recreation and sport in the 12 months prior to interview (Table 3). A total of 11.1 million persons ( $70.5 \%$ ) participated at least once per week (Table 4).

Figure 1: Weekly frequency of participation

Base: All persons aged 15 years and over ( $n=13,662$ )

## Age and sex

The overall participation rate for males and females was similar ( $83.0 \%$ and $82.6 \%$, respectively) (Table 1).
People aged 15 to 24 had the highest participation rate (91.7\%), declining to $71.6 \%$ for those aged 65 years and over (Figure 2 and Table 1).

Figure 2: Participation rates by age and sex

Base: All persons aged 15 years and over ( $\mathrm{n}=13,662$ )

## States and territories

Across Australia and within all states and territories, participation in exercise, recreation and sport has remained stable from 2003 to 2004 (Table 24).

## Labour force status

Those not in the labour force, including students and retired persons, had a significantly lower participation rate (76.0\%) than those employed (86.1\%) and unemployed (83.1\%) (Table 1). It is important to consider, however, that almost half ( $42.7 \%$ ) of those not in the labour force are aged 65 years and over, which may affect participation rates.

## Education

Participation rates increased with level of educational attainment, from 73.3\% for those that did not complete secondary school to $91.3 \%$ for those with a university degree. The highest participation rate was for those persons still at secondary school ( $95.7 \%$ ) and the lowest participation rate was for those persons who never attended school (56.9\%) ${ }^{1}$ (Table 1).

[^0]
## Type of activity

The activity with the highest participation rate was walking ( $39.0 \%$ ). An estimated 6.2 million persons aged 15 years and over walked at least once for exercise, recreation and sport in the 12 months prior to interview. This does not include bushwalking (the participation rate for this was 5.2\%), which ERASS reports as a separate activity. Other sports and physical activities that attracted high participation rates were aerobics/fitness (17.1\%), swimming (16.5\%), cycling (10.5\%) and tennis (8.4\%) (Box 1, Table 8 and Table 9).

| Golf | 6 | 1,240.2 | 6 | 1,282.0 | 3.4 | 7 | 1,250.6 | 0.8 |
| Bushwalking | 8 | 794.9 | 8 | 902.2 | 13.5 | 8 | 818.0 | 2.9 |
| Soccer (outdoor) | 10 | 551.3 | 9 | 668.5 | 21.3 | 9 | 659.2 | 19.6 |
| Netball | 9 | 612.4 | 10 | 613.3 | 0.1 | 10 | 564.3 | -7.9 |

Base: All persons aged 15 years and over (2001 n=13,424; $2003 n=13,703 ; 2004 n=13,662$ )

Walking had the highest participation rate for both males and females (Table 9), and across all age groups with the exception of the 15 to 24 year age group (Table 10).

For males, activities with the highest participation rates were walking (26.6\%), swimming (14.7\%), cycling (14.0\%), golf (13.1\%) and aerobics/fitness (12.8\%).

For females, activities with the highest participation rates were walking (51.3\%), aerobics/fitness (21.3\%), swimming (18.3\%), tennis (8.0\%) and cycling (7.1\%).

In the youngest age group, 15 to 24 year olds, the activities that attracted the most participants were aerobics/fitness (22.8\%), walking (17.9\%) and swimming (17.8\%). For the oldest age group, 65 years and over, walking (47.6\%), aerobics/fitness (12.1\%) and golf (8.6\%) attracted the most participants.

The activity that participants most frequently participate in is walking, where half of all persons who participated in walking did so 156 times or more a year - equating to 3.0 times per week. Other activities ${ }^{2}$ participated in frequently were aerobics/fitness, boxing, rowing and weight training (2.0 times per week) and running (1.9 times per week) (Table 8).

Participants took part in an average (mean) of 2.2 different sports or activities in the 12 months prior to interview. This ranged from 2.6 different activities for the 15 to 24 year age group to 1.6 different activities for those aged 65 years and over. Males participated in an average of 2.3 different activities compared to an average of 2.1 different activities for female participants (Table 7).

[^1]
### 2.2 Organised participation

## Overview

During the 12 months prior to interview in 2004, an estimated 6.8 million persons aged 15 years and over participated in at least one activity that was organised by a club, association, fitness centre or other type of organisation. This represents a participation rate of 42.7\% (Table 5). It also represents over half (51.6\%) of the 13.1 million persons who participated in a physical activity for exercise, recreation and sport.

In terms of frequency, 9 million persons (57.3\%) did not participate in organised physical activities during 2004, while 2.1 million (13.2\%) participated less than once a week, 2.9 million ( $18.2 \%$ ) participated once or twice a week, 1.2 million (7.4\%) participated three or four times and 625,300 (4.0\%) participated five times or more (Figure 3 and Table 3).

Figure 3: Weekly frequency of participation - organised activities

Base: All persons aged 15 years and over ( $\mathrm{n}=13,662$ )

## Age and sex

Of the 6.8 million persons who participated in organised physical activity for exercise, recreation and sport, participation was higher for males (44.7\%) than for females (40.8\%) (Figure 4 and Table 14).

Organised participation rates were highest in the 15 to 24 year age group (66.1\%), and declined steadily with age to $30.7 \%$ for persons aged 65 years and over.

Figure 4: Organised activity participation rates by sex and year

Base: All persons aged 15 years and over (2001 n=13,424; $2002 n=13,632 ; 2003 n=13,703 ; 2004 n=13,662$ )

## States and territories

Across Australia, the participation rate for organised sport and physical activities remained stable from 2003 to 2004 in all states and territories (Table 25).

## Type of activity

The organised activity with the highest participation rate was aerobics/fitness (8.8\%). An estimated 1.4 million persons aged 15 years and over participated in this activity in an organised environment at least once in the 12 months prior to interview. Other sports and physical activities that had high numbers of people participating in an organised environment were golf (4.3\%), tennis (3.8\%), netball (3.2\%), soccer — outdoor (2.8\%) and swimming (2.8\%) (Box 2 and Table 13).

Participants in organised physical activities for exercise, recreation and sport engaged in an average (mean) of 1.5 different organised activities in the 12 months prior to interview (Table 12).

Box 2: Top ten organised activities by number of participants 2001, 2003 and 2004

|  | 2001 |  | 2003 |  |  | Rank | 2004 |  |

| Lawn bowls | 9 | 280.3 | 9 | 353.9 | 26.3 | 9 | 343.4 | 22.5 |
| Australian football | 11 | 272.5 | 10 | 319.1 | 17.1 | 10 | 342.1 | 25.5 |

Base: All persons aged 15 years and over (2001 n=13,424; 2003n=13,703; $2004 n=13,662$ )

## Organisation of the activity

An estimated 4.7 million persons participated in activities that were organised by a 'sport or recreation club or association'. An estimated 2.7 million persons participated in activities that were organised by a 'fitness, leisure or indoor sports centre’ (Table 15).

### 2.3 Organised versus non-organised participation

Activities that were commonly participated in where participation is most often organised by a club, association, fitness centre or other organisation include softball ( $97 \%$ of softball participants engaged at least once in organised softball), lawn bowls (95\%), rugby union (92\%), outdoor hockey (91\%), netball and triathlon (90\%) (Table 13). ${ }^{3}$

Activities least likely to be organised include walking (only $2 \%$ of walking participants engaged in organised walking), waterskiing/power boating and fishing (4\%), cycling (8\%), roller sports and surf sports (9\%).

[^2]
## 3 Comparisons over time

### 3.1 Overall participation

Across Australia and within all states and territories, participation in exercise, recreation and sport remained stable from 2003 to 2004. Participation for males and females and across all age groups also remained stable, as did the frequency of participation.

While participation rates and frequency of participation have remained stable from 2003 to 2004, the number of persons participating in at least one activity has increased by 1.3 million since 2001 when ERASS data were first collected (Table 24).

Perhaps more importantly, the number of persons participating in exercise, recreation and sport at least three times a week has increased by 1.8 million since 2001. This represents an increase from $37.2 \%$ of the population in 2001 to $47.2 \%$ in 2004 ( $26.9 \%$ increase).

The physical activities that comprise the 'top ten' activities participated in by the population at least once for exercise, recreation and sport have remained unchanged from 2001 to 2004 (see Box 1 on page 5). Walking has enjoyed the largest increase since 2001, with the number participating in walking at least once during the 12 months prior to interview rising from 4.4 million persons in 2001 to 6.2 million in 2004 ( $41.7 \%$ increase). Other activities in the 'top ten' to experience significant increases since 2001 include aerobics/fitness ( $37.6 \%$ increase), running ( $21.0 \%$ increase), and cycling ( $15.3 \%$ increase).

### 3.2 Organised participation

As for overall participation, across Australia and in all states and territories, participation at least once in exercise, recreation and sport that is organised has remained stable from 2003 to 2004. Organised participation for males and females and across all age groups also remained stable, as did the frequency of organised participation from 2003 to 2004.

However, as for overall participation, participation in organised activities and frequency of that participation also increased from 2001 to 2004. During this period, participation increased by 721,600 persons. In addition, the number of persons participating in organised activities at least three times a week increased by 374,500 . This represents an increase from $9.4 \%$ of the population in 2001 to $11.3 \%$ of the population in 2004 (20.8\% increase).

The composition of the 'top ten' organised activities participated in by the Australian population at least once for exercise, recreation and sport has changed slightly from 2001 to 2004 (see Box 2 on page 8). In 2003, touch football was replaced by yoga in the 'top ten' organised activities. Of the current 'top ten' organised activities, yoga has experienced the largest increase (up from 153,100 participants in 2001 to 380,500 participants in 2004, representing a 148.5\% increase since 2001).

After sitting just outside of the 'top ten' since 2001, Australian football has edged into tenth place with 342,100 participants in 2004 (increasing from 272,500 participants in 2001, which represents a $25.5 \%$ increase). Basketball has left the 'top ten' for the first time since 2001 (with a $6.4 \%$ decrease from 2001).

a Relates to persons aged 15 years and over who participated in any organised physical activities for exercise, recreation and sport over a 12 -month period prior to interview in 2004. These persons may also have participated in activities that were not organised
b Components may not add to the totals as a person could have taken part in one or more sports and physical activities organised by more than one type of organisation

* Estimate has a relative standard error of between $25 \%$ and $50 \%$ and should be used with caution
** Estimate has a relative standard error greater than $50 \%$ and is considered too unreliable for general use

## 4 Explanatory notes

### 4.1 Introduction

ERASS collects information on participation in physical activity for exercise, recreation and sport by the Australian population. Participation is restricted to active 'playing' participation and does not include nonplaying participation such as coaching, refereeing and spectating or activities that are related to work or household chores. Practice and training activities are included.

The survey is conducted quarterly throughout Australia, with the fieldwork undertaken by ACNielsen Research. Results for 2004 were compiled by aggregating the four quarterly surveys conducted in February, May, August and November.

### 4.2 Scope

The survey collects information on persons who participated in exercise, recreation and sport in the 12 months prior to interview. The scope of the survey was all persons aged 15 years and over in occupied private dwellings (excludes people in special dwellings such as hospitals, hotels, nursing homes, etc).

### 4.3 Methodology

Mode: All interviews were conducted by telephone using ACNielsen's Computer-Assisted Telephone Interviewing (CATI) system.

Sample design: The sample design was a random survey stratified by state and territory. The sample is selected from the Electronic White Pages and one person is randomly selected per dwelling to complete the interview (based on the last birthday method).

Total sample: The total sample of records used to produce estimates for 2004 was 13,662 persons.
Overall response rate: The overall response rate is currently about $41 \%$. The response rate is the number of completed interviews divided by the number of contacts plus those where there was no answer after six calls.

### 4.4 Questionnaire

The questionnaire covers two main areas:

- Physical activity for exercise, recreation and sport over the last 12 months — identifying up to ten different types of activities participated in over the last 12 months, and for each type of activity determining whether it was organised by a club or association, the type of club or association and the number of times that activity was engaged in over the last 12 months
- Demographics - covers sex, age, marital status, number and age of children, educational qualifications, employment status and postcode.
A copy of the questionnaire is on pages 54-59.

### 4.5 Comparability of the data

The survey was first conducted in 2001. This publication provides results from the fourth annual survey, which was conducted in 2004. The survey will also be conducted in 2005 through to 2006, which will allow a comparison of participation in physical activity for exercise, recreation and sport over a six-year period.

ERASS is not comparable with data collected through other surveys of participation in physical activity. In particular, the data cannot be directly compared with participation surveys conducted by the Australian Bureau of Statistics (for example, the Population Survey Monitor) and by Sweeney Sports (Sweeney Research). This is due to differences in the scope, methodology and questionnaire design of the various surveys.

### 4.6 Standard errors and relative standard errors

Since the estimates presented in the tables are based on information obtained from persons from a sample of households selected randomly by telephone number, they are subject to sampling variability; that is, they may differ from those that would have been produced if all households had been included in the survey.

One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance because only a sample of households was included. There are about two chances in three (67\%) that a sample estimate will vary by less than one standard error from the number that would have been obtained if all households had been included, and about 19 chances in 20 (95\%) that the difference will be less than two standard errors.

For example, if an estimate of 100,000 persons is provided for participating in a particular activity, then we are $67 \%$ confident that if we surveyed the entire Australian population the result would be between 88,100 and 111,900 . Similarly, we would be $95 \%$ confident that, if we surveyed the entire Australian population, the result would be between 76,200 and 123,800.

Another measure of the likely difference is the relative standard error (RSE) that is obtained by expressing the standard error as a percentage of the estimate. The relative standard error is a useful measure in that it provides an indication of the relative accuracy of the estimate.

For the tables provided in this publication, only estimates with relative standard errors of less than $25 \%$ are considered sufficiently reliable for most purposes. However, estimates with relative standard errors between $25 \%$ and $50 \%$ have been included and are preceded by an asterisk (for example, *13.5) to indicate that they should be treated with caution and viewed as being merely indicative of the magnitude involved. Estimates with relative standard errors greater than $50 \%$ are preceded by a double asterisk (for example, **3.6) and are subject to sampling error too high for most practical purposes.

The table on page 53 gives the relative standard error cut-offs to be used when applying, if required, a single or double asterisk to the estimate. For example, for New South Wales an estimate between 9083 and 28,973 should be preceded by a single asterisk and used with caution, and an estimate less than 9,083 should be preceded by a double asterisk and considered too unreliable for general use.

### 4.7 Significance testing

When differences are detected between statistics, it is important to determine through testing if those perceived differences are statistically significant. For example, in NSW $41.5 \%$ and $42.7 \%$ of the population participated in organised physical activities for exercise, recreation and sport in 2003 and 2004 respectively. While on face value it may appear that this participation rate has increased by $1.2 \%$ between 2003 and 2004, statistical tests identify that there is not enough evidence to substantiate this. That is, the sample sizes are too small to reliably detect a difference of this size.

All comparisons between statistics have been tested for significant differences using applicable significance testing, with an alpha value of 0.05 . The alpha value is a number between 0 and 1 that sets a cut-off for differences to be statistically significant. For tests where proportions are being compared, the Bonferroni correction was also applied.

The Bonferroni correction is used when several dependent or independent statistical tests are performed simultaneously. This correction is required in these situations because while a given alpha value may be appropriate for each individual comparison, it is not appropriate for the set of all comparisons. In order to avoid the detection of spurious positives, the alpha value needs to be lowered to account for the number of comparisons being performed.

## 5 Exercise Recreation and Sport Survey questionnaire

The following questions are about physical activities you have participated in during the last 12 months for exercise, recreation or sport. Do not include any activities that were part of work or household and garden chores.

Q1 During the last 12 months did you participate in any physical activities for exercise, recreation or sport?

$$
\begin{aligned}
& \text { Yes ................................................................................................................ } 1 \text { Go to Q2 } \\
& \text { No ................................................................................................................. } 2 \text { Go to Q6 } \\
& \text { Don’t know } \\
& 9 \text { Go to Q6 }
\end{aligned}
$$

Q2 What activities did you participate in?
Up to maximum of ten activities to be coded
For each activity — ask Q3-Q5
Q3 Was any of this (activity) organised by a club, association or other type of organisation?

$$
\text { Yes, all (organised) ........................................................................................ } 1 \text { Go to Q4 }
$$

Yes, some (organised) .................................................................................. 2 Go to Q4
No
3 Go to Q5
Don't know
9
Go to Q5
Q4 What type of club, association or organisation organised the (activity)?
(multiple response)

- Fitness, leisure or indoor sports centre that required payment for
participation ...................................................................................................................... 1
. Sport or recreation club or association that required payment of membership, fees or registration 2
- Work ................................................................................................................................. 3
- School ................................................................................................................................ 4
- Other (specify) ................................................................................................................... 8

Q5 Including any practice or training, approximately how many times did you participate in (activity) during the last 12 months?

Record actual number
Q6 Sex of respondent
Male ........................................................................................................................................ 1

Female 2

Q8 Which of the following best describes your current marital status? (Read out) (Record age)
Married .....  .1
De facto .....  2
Separated .....  3
Divorced .....  4
Widowed .....  5
Never married .....  6
Refused .....  7

Do you have any children under 18 years of age?
Yes ..... 1
Go to Q10
No2
Q10 How many of these children are living with you?
(Record actual number. If zero then go to Q12)
Q11 What is the age of each of these children who are under 18 years of age and living with you? (Record actual age of each child)
Q12 What is the highest educational qualification you have completed?
University degree or higher (including postgraduate diploma) ..... 1
Undergraduate diploma or associate diploma ..... 2
Certificate, trade qualification or apprenticeship ..... 3
Highest level of secondary school ..... 4
Did not complete highest level of school ..... 5
Never went to school ..... 6
Still at secondary school ..... 7
Other (specify) ..... 8
Refused ..... 9

Q13 Do you have a full-time or part-time job of any kind?
Yes ..... 1
Go to Q14

No
.. 2

Q14 Do you have more than one job?
Yes
$\qquad$

Q15 How many hours a week do you usually work (in all jobs)?
Go To Q17
Q16 Did you look for work at any time in the last four weeks?
$\qquad$

No
Q17 What is the postcode of the suburb/area where you live?
(Record postcode)

## 6 Glossary

## Aerobics/fitness

Includes calisthenics, Chinese exercise, exercise bike, gymnasium workouts, military exercise, Prime Movers for Over 50s and Step Reebok

## Capital cities

The six state capital city statistical divisions, the Darwin Statistical Division and the Australian Capital Territory

## Cycling

Includes BMX and mountain bike riding

## Dancing

Includes ballet and line dancing

## Employed full time

Persons employed full time are those who usually work 35 hours or more a week (in all jobs)

## Employed part time

Persons employed part time are those who usually work less than 35 hours a week (in all jobs)

## ERASS

Exercise, Recreation and Sport Survey

## Fitness organisation

A fitness, leisure or indoor sports centre that requires payment for participation

## Gymnastics

Includes trampolining

## Ice/snow sports

Includes blade-skating, ice hockey, ice-skating and snow skiing

## Married

Married persons are those who describe their marital status as being married or in a de facto relationship

## Martial arts

Includes chi kung, judo, karate, kick boxing, taekwondo and Tai Chi

## Mean

Often known as the average, which includes all data values in its calculation

## Median

The median represents the centre or midpoint of the data. One-half of the data will have values less than the median, and the other half will have values greater than the median

## Motor sports

Includes car, motorbike, speedway, drag and go-kart

## Netball

Includes indoor and outdoor netball

## Not in the labour force

Persons not in the labour force are those who did not have a job when interviewed and had not looked for work in the four weeks prior to interview

## Not married

Persons who are not married are those who describe their marital status as being either separated, divorced, widowed or never married

## Organised sport and physical activities

Sport and physical activities that were organised in full or in part by a club, association or other type of organisation

## Orienteering

Includes rogaining and cross-country running

## Participation rate

For any group, this is the number of persons who participated in the activity, expressed as a percentage of the population in the same group

## Rest of state

The whole of Australia less the six state capital city statistical divisions, the Darwin Statistical Division and the Australian Capital Territory

## Rock climbing

Includes abseiling and caving

## Roller sports

Includes inline hockey, roller-blading and skateboarding

## RSE

Relative standard error

## Rugby union

Includes rugby sevens

## SE

Standard error

## Shooting sports

Includes hunting, paintball and pistol shooting

## Sport organisation

Sport or recreation club or association that requires payment of membership, fees or registration

## Surf sports

Includes sailboarding, surfing, wind surfing. Excludes surf lifesaving

## Swimming

Includes board diving

## Unemployed

Unemployed persons are those who did not have a job when interviewed and looked for work in the four weeks prior to interview

## Volleyball

Includes indoor and outdoor volleyball

## Walking

Indicated as 'Walking - other' in the tables. This category excludes bushwalking, which is reported separately

## Weight-training

Includes bodybuilding, circuits and weight training for fitness

## 7 Errata: Previous ERASS annual reports

For the purposes of preparing the 2004 ERASS Annual Report, the Australian Sports Commission conducted an audit of previous ERASS publications. This audit identified that, in general, all findings in the 2001-03 reports were accurate. However, as a result of changes in the way ERASS annual reports are now being prepared, some results published in 2001-03 require slight adjustment. These adjustments are primarily required for two reasons as discussed below:

### 7.1 Corrected postcodes

During the course of the audit completed by the Australian Sports Commission, it became apparent that some respondents from 2001-03 were removed from their respective ERASS datasets by the Australian Bureau of Statistics (ABS) during its data cleaning stage. Specifically, the ABS deleted respondents whose reported postcodes were either not valid or were assigned to post office boxes and, therefore, could not reliably be assigned to a 'capital city' or 'rest of state' classification within the dataset. These respondents were removed from the datasets because the ABS had no further information by which to assign postcodes to these respondents.

However, as of 2004, the ABS is no longer involved in the preparation of ERASS reports. Instead, ACNielsen (who previously supplied ERASS raw data to the ABS for analysis and reporting) is now supplying raw data and data tables directly to the Australian Sports Commission. Instead of deleting respondents who report invalid postcodes, ACNielsen has used information from the Electronic White Pages to apply 'corrected postcodes' to these respondents, thereby keeping these respondents in the datasets. Using these 'corrected postcodes' both ACNielsen and the Australian Sports Commission are comfortable that these respondents can be reliably classified as being 'capital city' or 'rest of state' respondents.

### 7.2 Weighting

The other key difference between the ABS and ACNielsen data is associated with data weighting. The investigation into these weighting differences determined that the ABS was using the Estimated Resident Population (ERP) based on the 1996 Census to weight ERASS for 2001, 2002 and 2003, while ACNielsen is now using the ERP based on the 2001 Census. In just about all cases the differences in weights are very small.

### 7.3 Consequences of these differences

Both ACNielsen and the Australian Sports Commission believe that the effects of these slight methodological differences explained above are minimal. For this reason, the Australian Sports Commission, in consultation with the states and territories, has decided to use ACNielsen data for all future ERASS publications including this 2004 Annual Report. This will mean that when 2001 to 2003 data reported in this document are compared to previous ERASS publications there may be some minor differences. However, it is the opinion of both ACNielsen and the Australian Sports Commission that these differences do not affect the overall findings of ERASS. Examples of the small differences between 2003 published data and the data that will now be used in ERASS publications are as follows:

## Box 3: Examples of differences between 2003 published data and revised 2003 data

| Measure | 2003 published result | Revised 2003 result |
| :---: | :---: | :---: |
| Overall participation in at least one physical activity for exercise, recreation and sport | 12,850,700 persons <br> $82.5 \%$ of the population ${ }^{\text {a }}$ | 12,844,000 persons <br> $82.5 \%$ of the population ${ }^{\text {a }}$ |
| Weekly frequency of participation five times per week or more | 7,144,900 persons <br> $45.9 \%$ of the population ${ }^{\text {a }}$ | 7,139,700,persons <br> $45.8 \%$ of the population ${ }^{\text {a }}$ |
| Walking participation | 5,905,600 persons <br> $37.9 \%$ of the population ${ }^{\text {a }}$ | 5,900,600,persons <br> $37.9 \%$ of the population ${ }^{\text {a }}$ |
| Aerobics/fitness participation | 2,487,600, persons <br> $16.0 \%$ of the population ${ }^{\text {a }}$ | 2,487,200,persons <br> $16.0 \%$ of the population ${ }^{\text {a }}$ |

a Relates to persons aged 15 years and over who participated in sport or physical activity over a 12-month period prior to interview in 2003
